

## News Release

### TERRABIOGEN SCHEDULES TRIALS AT LANGARA GOLF COURSE

**Vancouver, BC, July 4, 2011** – TerraBioGen Technologies Inc. (TSX-V: **TBG**), a developer and marketer of proprietary technologies for the production of organic-based, high-value agricultural products from organic wastes, is pleased to announce that it has scheduled growing trials at Langara Golf Course in Vancouver.

For several years, TerraBioGen has conducted product field trials on turf applications with leading institutes such as Cornell University's Department of Horticulture in Ithaca, New York, which generated very positive results. The Cornell study demonstrated that the use of TerraBioGen's products allowed up to a 50% reduction in synthetic fertilizer applications and up to a 75% reduction in pesticides without impacting turf quality. Highly successful commercial field trials have simultaneously been conducted at Nicklaus North Golf Course in Whistler, B.C. The field trial planned for Langara Golf Course in Vancouver coincides with proposed legislation before the provincial government that would ban the use of cosmetic pesticides in British Columbia.

Blair Heffelfinger, President and CEO of TerraBioGen stated "These growing trials are very important and have produced excellent results in the past by promoting turf quality, suppressing foliar and soil borne disease, and reducing synthetic fertilizer input requirements. We are pleased to play a role in the potential ban on cosmetic pesticides by providing an effective, safe, organically-based alternative."

Jeff MacLean, the Golf Course Superintendent at Langara commented "I am happy to be working with TerraBioGen once again. The results of our field trials at Nicklaus North were very encouraging, and these organic products could be a great fit with the City of Vancouver's commitment to a greener, more sustainable city."

#### **About TerraBioGen**

Located in North Vancouver, BC, TerraBioGen Technologies Inc. is committed to research and development to continue to improve the efficiency of its technology and the quality of its agricultural products. It is further committed to developing a worldwide marketing capability to ensure market acceptance of its products.
